

CEREBRALHELM / DESIGN SYSTEM

Visual Design Reference

Shared dashboard shell, four modes, Heimlich, agents, layouts, and safety

Current design baseline | 24 June 2026

IMPLEMENTATION REFERENCE

One shell, four configurations

Control placement stays stable while context, content, and color change.

LEFT RAIL

01Today / Tonight

02System Health

03Free Widget A

04Three linked headlines

CENTER STAGE

01Global Search

02Quick Apps

03Heimlich ambient/chat

04Eight Quick Actions

RIGHT RAIL

01Mode Switcher

02Four Agents

03Free Widget B

04Agent expansion

Persistent bottom bar

HEIMLICH STATE

WEATHER

MODE

WI-FI

BATTERY

DATE / TIME

SETTINGS

In layout mode, items compact or move so the project/course/context hot-swap control can occupy the center. The bar never overlaps the dashboard and never disappears behind a managed layout.

Executive Home Dashboard

The reference composition for the shared dashboard shell

HOME

EXECUTIVE

SHARED SHELL

DESIGN INTENT

Establishes the balance CerebralHelm should preserve across every mode: dense operational rails surrounding a calm, visually dominant Heimlich center.

BINDING DETAILS

- Three-column canvas with a dedicated bottom-bar track.
- Heimlich remains the largest and calmest surface.
- Quick Actions use four compact bars above four larger boxes.
- Executive content is broad: all calendar events, markets, news, projects, and general apps.

INTERPRETATION

The current specification replaces the upper Command Center with Quick Apps, adds battery to System Health, and keeps exactly eight Heimlich actions.

School Home Dashboard

Academic context using the same composition with a stronger identity

HOME

SCHOOL

ACADEMIC

DESIGN INTENT

Shows how a mode can feel substantially different without moving the controls. Academic schedule, deadlines, courses, apps, greeting, and actions all change together.

BINDING DETAILS

- Calendar is filtered to classes, labs, office hours, study blocks, and configured academic events.
- Left free widget is Deadlines; right free widget is Courses.
- Quick Apps default to academic tools but remain user configurable.
- One Heimlich action opens the School Layout.

INTERPRETATION

Use electric blue as the dominant mode identity with a warm gold counter-accent. Exact values remain live-tunable semantic tokens.

Entertainment Home Dashboard

Evening context, media continuity, and downtime controls

HOME

ENTERTAINMENT

DESIGN INTENT

Demonstrates that the dashboard can become leisure-oriented without becoming visually unserious. Tonight, media, social apps, and playback context replace work pressure.

BINDING DETAILS

- The schedule may label itself Tonight when appropriate.
- Left free widget is Spotify; right free widget is Media List.
- News follows configured entertainment, sports, golf, game, and media interests.
- One action opens the Entertainment Layout.

INTERPRETATION

The media rows and sample titles are illustrative. Preserve the compact operational density and emerald/cyan character, not the exact content.

Developer Home Dashboard

Engineering state, repositories, and project-aware commands

- HOME
- DEVELOPER
- ENGINEERING

DESIGN INTENT

Makes active engineering context legible at a glance while keeping the same schedule, system, Heimlich, agents, mode, and bottom-bar grammar.

BINDING DETAILS

- Calendar filters to engineering work and configured project events.
- Left free widget is Project Git Status; right free widget is Repositories.
- Quick Apps favor editor, terminal, source control, containers, and planning tools.
- One action opens the Developer Layout.

INTERPRETATION

Use a restrained cool-white/cyan palette. Git, build, test, PR, branch, and deployment values must come through bridge-owned data contracts.

Heimlich Conversation and Gated Action

The center becomes a working transcript while policy owns confirmation

HEIMLICH

CONVERSATION

DESIGN INTENT

Shows the transition from ambient presence to active work. The chat occupies the Heimlich region; a high-priority confirmation appears above it only when policy requires approval.

BINDING DETAILS

- Conversation view includes transcript, activity context, follow-up input, and minimize-chat control.
- Gated actions show exact action, destination, affected app, preview, and consequences.
- Approve, Review, and Cancel are explicit.
- The UI sends a decision; it never executes around policy.

INTERPRETATION

Confirmation styling is neutral system blue in the product, regardless of the gold Executive dashboard visible behind it.

Expanded Agent Workspace

A scoped specialist expands without replacing the CerebralHelm environment

AGENT

EXPANDED

CONTEXT

DESIGN INTENT

The selected agent becomes a focused workspace with its own conversation and evidence while the compressed dashboard remains recognizable and reachable.

BINDING DETAILS

- Expanded workspace provides Chat, Context, History, linked knowledge, next actions, and persistent input.
- Agent icons remain fixed across modes.
- Compact statuses are Idle, Waiting, Thinking, and Ready.
- The canvas reflows; the panel must not cover critical controls.

INTERPRETATION

Financial values and linked sources are illustrative. Agent tools and knowledge stay scoped by configuration and policy.

School Layout Mode

A managed multi-application workspace with persistent CerebralHelm control

- LAYOUT
- SCHOOL
- HOT SWAP

DESIGN INTENT

Shows CerebralHelm arranging a real working environment rather than trapping the user inside the dashboard. Native apps remain primary; CerebralHelm stays present through the bottom bar and safety layer.

BINDING DETAILS

- Layouts resolve from versioned configuration, not saved screenshots.
- The bottom bar makes room for a central project/course/context hot-swap control.
- Partial success and missing apps are visible and recoverable.
- Over-app gated actions use the same universal confirmation contract.

INTERPRETATION

Exact application geometry is adapter-resolved and may vary by display. Preserve roles, reachability, hot swapping, and recovery behavior.

Fullscreen CerebralHelm Sidebar

Compact access while another application owns the screen

SIDEBAR

FULLSCREEN

DESIGN INTENT

Keeps Heimlich and the command environment available without forcing an exit from the current fullscreen application.

BINDING DETAILS

- Contains Heimlich, global search, modes, quick actions, schedule, apps, agents, and return-to-dashboard.
- Reuses the same state and intent contracts as dashboard components.
- Can be collapsed quickly and restores focus correctly.
- Remains compact enough to preserve useful application space.

INTERPRETATION

The mockup is a composition reference. The sidebar must respond to display size, safe areas, focus rules, and reduced-motion preferences.

What the images do and do not specify

Use the mockups as visual direction and the design markdown as the behavioral contract.

BINDING

- Region placement and shared-shell composition
- Mode-specific widget mapping
- Search ordering with Ask Heimlich first
- Eight-action four-plus-four Heimlich geometry
- Agent statuses and expansion behavior
- Neutral confirmation and layout hot-swap behavior

LIVE-TUNABLE

- Exact color values, glow, translucency, and spacing
- Typography scale within accessibility constraints
- Icon choice within the established icon system
- Wave implementation after target-Mac profiling
- Animation timing and density
- Sample copy and fixture data

ARCHITECTURAL

- React components submit intent through CerebralBridge
- Modes are validated configuration, not page forks
- Widgets are registered slots with discrete contracts
- Policy owns confirmation and risk classification
- Native adapters resolve platform and window behavior
- All operational panels support degraded states

Companion artifact: CEREBRALHELM_DESIGN_SPEC.md contains the complete component contract, mode matrix, data and state requirements, configuration shape, responsiveness, accessibility rules, and acceptance criteria.
